

MATTEO MANCINI

Profile

Data Scientist (EQF 7) combining a rigorous background in Statistics with specialized expertise in advanced AI architectures. Experienced in statistical modeling and the implementation of interoperable AI multi-agent systems via A2A and Model Context Protocols (MCP). Passionate about bridging the gap between deep quantitative research and scalable, production-ready AI solutions.

Language Skills

- **Italian** : Mother tongue
- **English** : Fluent

Skills

- **Programming** : Python, R, SQL, PostgreSQL.
- **AI & ML** : A2A Protocols, MCP, RAG , LangGraph, google-adk.
- **MLOps & Viz** : Docker, Prometheus, Grafana, Bokeh, ggplot2.
- **Tools** : Git, Matlab, Excel.

EDUCATION

MASTER FOR SMART DATA SCIENCE

Ensai, Bruz, France 2025–Current
◊ Website : ensai.fr | Field of study : Data Science | Level in EQF : 7

STATISTICAL METHODS AND APPLICATIONS

La Sapienza, Rome, Italy 2024–Current
◊ Website : La Sapienza | Field of study : Data Analyst | Level in EQF : 7

BLENDED INTENSIVE PROGRAM (BIP)

Paris Lodron University, Salzburg, Austria 2024
◊ Website : Paris Lodron | Field of study : Regulation of Big Data

BACHELOR’S DEGREE IN MANAGEMENT STATISTICS

La Sapienza, Rome, Italy 2021–2024
◊ Website : La Sapienza | Field of study : Statistics

Work Experience

Internship IPS S.p.A. - Aprilia, Italy 2026.03 – 2026.09

- ◊ Engineered an multi-agent system based on A2A protocol for automated audio and video analysis, utilizing the Model Context Protocol (MCP) for semantic memory and task delegation.
- ◊ Developed Python agents (NLP, Speech-to-Text, Face Recognition), integrating PostgreSQL for structured data storage and Qdrant for high-performance vector retrieval.
- ◊ Containerized the agent ecosystem with Docker to ensure reproducibility, and established robust telemetry and real-time monitoring pipelines using Prometheus and Grafana.

Project on Spatial Interpolation – Rennes, France 2026

- ◊ Conducted in collaboration with Insee, systematically comparing tree-based ensemble methods (Random Forests, Gradient Boosting) with classical spatial interpolation (Kriging, IDW, Spline).
- ◊ Analyzed trade-offs between predictive accuracy, assumptions, and computational cost, delivering a synthetic report and a reproducible code repository.

Bayesian Modelling Project – Rome, Italy 2025

- ◊ Built Bayesian regression models in R and JAGS to analyze NBA scoring behavior, comparing home vs. away performance via posterior distributions.
- ◊ Evaluated competing models using DIC and predictive accuracy, producing probabilistically interpreted team rankings.

Tests for the Inverse Gaussian Distribution – Rome, Italy 2024

- ◊ Developed and implemented goodness-of-fit tests in R via Monte Carlo simulations to evaluate the Inverse Gaussian distribution across different sample sizes.
- ◊ Conducted asymptotic analysis to assess parameter independence, strengthening simulation-based inference skills.
